### YOUR SUBMISSION

**Submission:**

**Do you have any additional comments or suggestions?:**

The laws push growing a cannabis underground to the few who take on hydroponics and choose plant strains that are high yielding and mainly INDICA . A host of potentially toxic chemicals are used in these systems ..INDICA strain makes you lethargic ,sleepy and nonproductive. People don't really go and put a few plants in the bush anymore like the 1980,s and so there is no variety ,we're stuck with what ever we get . SATIVA strains of cannabis are uplifting energetic and creative but you cant get it these days as they were mainly an out door plant. As all growers use cuttings the strength diminishes .We find ourselves smoking more and more to get a buzz and its wrecking our lungs and arteries and not giving the desired effect. A good strain of Sativa you would have a few puffs and get on with renovating the house . It improves appetite ,mood and possibly give you the giggles without wiping you out ,which cant be a bad thing in this day and age . Let us grow 2 plants per household then we can throw away the cigarettes that are costing folks their wallets and there health . Get rid of the backyard dealers and can cut crime and save people trying to get very dangerous synthetic weed .Normal people who have a therapeutic puff now and then don't typically go on violent rampages like alcohol. I think that the government should be in charge of seed sales. If they sell only female seeds the plants will not produce their own seeds thus having to go to a government store for supply . Do some research on INDICA and SATIVA cannabis ,plenty on Youtube . We need Sativas like the old days which grow best outside . 2 plants ITS TIME ....
