(If there is a cure protocol for Covid and the Government bans the use of it and people continue to die...is that then Industrial Manslaughter?)

Dr. Zelenko is the New York doctor that discovered the Hydroxychloroquine (HCQ), Azithromycin and Zinc protocol, that ended up being endorsed by Trump. He has since treated 2000 covid patients effectively with no loss of life. He has been contacted by leaders of countries. Seven countries are now following his protocol (but not Australia). In this interview he goes over his treatment and also what preventatives to take. He emphasises the use of zinc, something that most of the current medical protocols are still missing. "HCQ is the gun and zinc is the bullet."

HCQ is critical to use in the first cycle of the disease (Day 1-5).
Complications like lung infections require antibiotics like azithromycin (which is also anti-viral) to be used as well.

He notes: so far there have been 70 medical studies on HCQ
- 56 were positive
- 46 were peer reviewed.

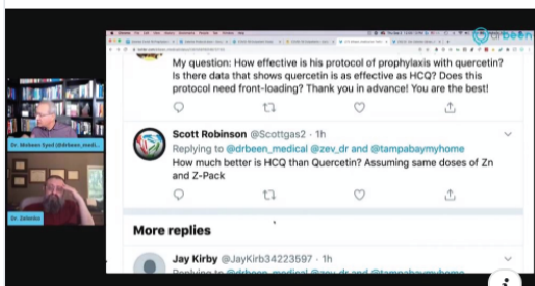

Only 14 were negative or neutral
-10 done on ICU patients on ventilators (missing the Day 1-5 window where HCQ is very effective)
- 4 studies used homicidal doses (2400mg vs his protocol which is 400mg)

The Lancet study was withdrawn as FRAUD.

The W.H.O. used The Lancet study to urge world-wide ban of HCQ. (It needs to be revoked.)

The earlier studies have been disputed and can no longer support the banning of this life saving Covid protocol anymore. Governments withholding treatment are not acting in the best interests of their citizenry.

Time to review the ban for Australia. Time to review the ban in Victoria. Please listen to this interview between the two doctors.
