

As a sperm donor , I donated at the Royal Women's Hospital, 1978, I have often wondered what happened to the "resulting children"

My enquiries to the RWH contact [redacted] were that 4 , 3 girls and a boy resulted, but as I had signed a non disclosure there could be no further info transfer.

I have often tried to get the weekend papers to do something around Fathers day, for as I go thru life I see my kids and others grow and wonder how these 4 survived / excelled in life.

Personally I have discussed this part of my life with my current partner and children, so full disclosure is not a problem to me, the possibility of being able to assist them if needed is always not far from my thoughts.

I am able to participate in any way and will welcome info re the findings of this inquiry.

Regards,

Paul Ruff
