DONOR-CONCEIVED
PEOPLE TO INFO DONORS

INQUIRY INTO ACCESS BY PEOPLE TO INFO DONORS
FROM
MISS MARIA ANN KOLOVRAT

TO EXECUTIVE OFFICER
VICTORIAN PARLIAMENT LAW REFORM COMMITTEE
PARLIAMENT HOUSE
SPRING STREET
EAST MELBOURNE VIC 3002
EMAIL to vpire@parliament.vic.gov.au

Any above no's receives sms text messaging ^{too!} instead of Email text processing!
(Note Instead of an Email address, just type in any of 10 digit nos as the recipient address)
IF you wish to send me a text message at any time Thankyou very much! ~~and~~

To whom it may concern, DEAR SIR / MADAM, I MARIA ANN KOLOVRAT OF ABOVE ADDRESS AM SUBMITTING MY SUBMISSION IN THEORY ABOUT THE INQUIRY INTO ACCESS BY DONOR-CONCEIVED PEOPLE TO INFORMATION ABOUT DONORS, FOR THE VICTORIAN PARLIAMENT LAW REFORM COMMITTEE TO CONSIDER. Firstly section (a) The legal practical and other issues that would arise if all donor conceived people were given access to identifying information about their donors and their donor-conceived siblings, regardless of the date that the donation was made; be careful not to create psychological attributes to donor conceived people about their donors if access were given the donor conceived might start to assume and think they'd look like them or clone like them. It's far more better to remain confidential and professional mantle of this field maintained through this process. It would be a shame that if it were allowed that precious time would be sold off into cheap argument and gossip! Time costs money, money costs time and yes it's very precious, We all don't have to look at each others intricate individuals' or families' health insurance schemes of who made the medicine or crafted it all up!

An on going therapy can be given optionally to the Donor Conceived patient as a choice for support, care or ongoing certain requirements that don't require identifying information about their donors, only information required would be to maintain and requirements for the stability health nurture of the new organ and comfortable adaptability.

The relevancy of Donors consent Medical Research councils ethical guidelines uses of assisted reproductive technology in clinical practice and research ie → story June 28/2011, 12:00 AM:

Scientist to create A Test-Tube Hamburger, burger made with Beef mince grown from stem cells, is less than a year away to be produced. Dutch scientist say Eat meat, No need animals slaughtered. Next few decades world's population increase = Not to be enough live stock for everyone. Laboratory grown Beef, Chicken and lamb be normal. Scientist developing burger grown from 10,000 stem cells extracted from cattle, kept in lab to multiply more than a Billion \times 's times to produce muscle tissue similar to beef. This product called VITRO MEAT.

Professor of physiology → Mark post "A Maastricht University Netherlands. The professor: "I don't see any way you could rely on Old-Fashioned Livestock in the coming decades. In vitro meat will be the only choice left" "We are trying to prove to the world we can make a product out of this, and we need a courageous person who will be willing to be the first to taste it. If no one comes forward then it might be me!

Professor post → To Scientific American Magazine First (1st) test tube burger made within (12) twelve months, 200g grown strips pork equals same method = Admittational say no particular appetising, being grey → texture to calamari?

Fish Fillet → Grown in New York Lab cells from gold fish muscles tissue.

If results = No same as proper meat → scientists say public would get used to it).

20.50 \times 2 = Double meat consumption "Test Tube Burger = 1st stage in Food revolution that solve problem for more → on the call for a Human Guinea pig to eat a Test Tube Hamburger go to the Daily Telegraph.

NOTE. The same can technology swift for Donors and Reproductivitiational views of technology to make New ones from test tubes etc! not

WE ALL do remember and will Remember the
 TV DRIVE TO ENCOURAGE DONORS (SYDNEY MORNING
 WEDNESDAY JUNE 3, 1992) (HERALD (SVELECKY))

The Kidney Foundation of Australia has decided shock is the best strategy in its latest effort to increase community awareness of the pressing need for organ donors. It hopes a new television commercial to be launched tomorrow night (Thursday June 4, 1992) will jolt the collective public consciousness and encourage families to start talking about a subject still considered taboo in most households. The ad, created by advertising and design shop HULSBOSCH PTY LTD, opens with the major of a young male corpse - ~~corpse~~ in a coffin. Its message focuses on the need for open discussion between family members about individual choice regarding organ donations and aims to encourage consideration of the issue at a young age. According to HULSBOSCH managing director Mr Hans Hulsbosch, the ad was designed to "jolt people into thinking about the issue and to get death and organ donation out of the closet". The Federation of Australian Commercial Television Stations (FACTS) has given the 45-second TV ad a PGR classification which means it can only be screened after 7.30 pm. HULSBOSCH says the decision was disappointing but he is hopeful the network will agree to provide free, or at least heavily discounted, air time in ensuing weeks to allow the ad to reach a wider audience.

The agency donated its time free of charge and the ad was produced at cost. Created around the theme "Give and let live - Decide to be a donor and tell your family", the ads will be followed by an educational campaign including leaflets and school information kits. Australia has one of the lowest organ donor rates in the developed world, but an alarming high number of people - at least 3,000 - (or more these days 2011) - awaiting organ and tissue transplants. According to the Australian Co-ordinating Committee on Organ Registries and Donations (ACCORD), Australia only produces 209 organ donors a year (or just a little bit more than that these days 2011), of the 128,000 people who die each year, only one in 600 is likely to become a donor.

FEATURE NST → AT www.donorsorgan.com.au

Amazingly, Australia there is no National register of consenting Organ donors. Donor Cards after become irrelevant because next of Kin must also provide their consent to organ (donors) transfer at the time of death.

Full page teaser ads will appear in National News papers tomorrow - National Organ donation Awareness Day, 1992.
Sydney Morning Herald (sue lucky) ✓

Note these kind of Renewed advertising can improve people's awareness to donating donors organ through televised educational T.V Commercials.

Any practical difficulties in releasing information about donors who provided their gametes before 1 July 1988, because in many cases records are not available either because the procedure was carried out privately or records were not stored centrally → May be accessed through Biology Critical faculty or Reproductive faculty which hold information like Gametangium is the organ in which gametes are formed as mature germ cell unites with another in sexual reproduction. (Also gametophyte - Game producing form of plant with an alternation of generation ~ hence).

The Options are to be of a positive approach to the donor conceived people / Donors and clients for changes to current arrangements, including nonlegislative options are to be careful of the negativity of recent Medics whom seek the right of refusal 19 July 2011 Survey medical students believe they should have the right to conscientiously object to treating certain patients survey of more than 700 British Med' Students. Procedures include abortions and treating drunken patients, prescribe birth control pills. Non religious reasons, but 1/5 fifth cited religion as key factor Jewish Muslims, Protestant students were most likely. Australia's peak medical body believes similar attitudes exists here.

and medical schools might need to help up the teachings on ethical issues.

DR Hambleton believed Australian doctors "Conscientious objections" were rare but did happen.

But if you are the only doctor in a certain location and have an objection you have to consider whether you are the right doctor for that location. → SAYS DOC HAMBLETON!
 AMAS → code of 'ethics' advises docs Australia, when personal moral judgement or Religious beliefs prevents them from recommending some form of therapy they should inform their patients so they may seek care (G.P) else where!

Objections raised 44.1 the percent for non religious, 19.7 the percent based on Religious reasons. And 36.2 were both. For Moral, cultural and religious 14.2 Unsure 45.2 Agreed, 40.6 Disagreed. And downgraded intimate examinations of patients of the opposite sex and also treating patients high on drugs.

That these discrimination don't go out of control! →

Yes liver transplants saves lives from all age groups

Dead or Alive Cutting Issue for organ Donors
 The head of the Federal health department is worried a Melbourne doctor's comments that not all organ donors are dead when their organs are removed will undermine effort to boost Australia's donation rate. Double thanks to Organ Donor :- John Miller and his step daughter Andrea of Tennantit know the benefits of organ donation.

Most Donors not truly "dead" when Organs are removed
 Most organ donors in Australia are not truly dead when their organs are taken and after transplant procedures do not conform with the law as a leading Melbourne doctor has argued.
