RE: INQUIRY INTO DRUG LAW REFORM

Pill Testing Saves Lives

Us drug user's are very proud of our habits, we have been enlightened by psychedelics in a way that only can benefit ourselves. It is in our best interest to change the laws, we have the choice of taking these drugs, not for they harm they bring, but for the joys that came with them.

The physically addicting drugs should stay schedule 1 as they cause too much harm and dependance on the body. But psychedelics such as mdma and lsd can be used for therapy and also recreational use without long term affects, so long as these substances are not being abused. Education is key, and so is making sure you are taking what you want to be taking. Pill testing will stop people consuming dangerous drugs or drugs that they do not wish to take. We must stop PMA and other RCs from spreading and instead let clean drugs be consumed. Little harm has been caused from psychedelics when clean substances have been taken. The same cannot be said for alcohol and tobacco. The laws are backwards and against the people, we have the freedom to explore our minds, so why rob us of this.
