I believe that there is a need to thoroughly investigate the administration structure of Vic Roads & the manner in which highways are designed & Constructed. It is beyond understanding & belief that sections of the Western Highway can be removed right up to another pothole or damaged section of the highway & then stopped. Sections of the Western Highway which were built under the duplication of the highway have every year since their construction required removal & reconstruction.

Who has failed in the design of these roads?
Who has failed in the administration of the design standards of these roads?
Who has failed in the construction phase of the highway?
Who has failed in the administration of Vicroads to recognise the yearly need to remove & reconstruct the same sections of ro
Who has failed in the finance & budget area of Vic roads to recognise the repeated & increasing cost for the same sections of roadway removal & repair?
