I trust your committee will look seriously at the shocking condition of the roads in South West Victoria and in particular the material roads leading to the Port of Portland.

Another big issue is the repairs being done are not good enough and are breaking up within weeks of being completed. In May 2017 on the Heywood Highway approach 4 KMs north of Portland, about 1 KMs of the highway was completely rebuilt but in less than 6 months this was breaking up.

These are dangerous roads to drive on, but we have choice. When I started driving we had the country roads board who built and maintained country roads in excellent condition.

The work being done on our roads today is so poor it is money being wasted.

The system we have now for maintaining our roads is not working, they just keep getting more dangerous every day. Please do something.

Yours faithfully,
