YOUR SUBMISSION

Submission:

It has been proven by many institutions including the World Health Organisations that lock-ups do NOT work, that masks do not work, that stopping all people from working do not work.

It has now been shown that we need to take care of the most vulnerable, e.g. the elderly, those at risk need protection, but those of the wider community need to be able to go about their normal business. Hospitals are empty, people needing operations are in pain because operating theatres are closed etc.

Yes, there will be people getting sick, but there are also people getting sick with flu and other diseases, take normal care of them, AND STOP THE FEAR MONGERING.

I think the fear mongering is even worse than the actual disease. We now know there are medications that can be given when an early diagnosis is given.

There is an increase family breakdown, divorce, family violence, child abuse, suicide. Road rage, attack on police. Do they not count into this count of "cases"

Do you have any additional comments or suggestions?:

I would like to see this ruled by people in the medical field not political dictators
