Subject: Public Health and Wellbeing Amendment (No Jab, No Play) Bill 2015

Dear Ms Lizzie Blandthorn and whom else it may concern,

I am writing in regards to the proposed No jab no pay bill and to let you know of my concerns at this passing. I am a mother to 2 boys, one fully vaccinated who suffered severe facial eczema (bleeding and raw) after his first round of vaccines and sleep disorders there-after where he would wake every 1/2 hour all night long up until roughly a year old, he now 4 years later has anxiety and sensory issues to the point I have to stay at home as he has been unable attend daycare. He has a younger brother who is now 11 months old who we chose not to vaccinate after doing a lot of our own research and definitely did not make this decision lightly.

Our 11 month old has never been sick. Not once. No eczema, no sleep issues, no food intolerances. I think he's had a sniffle once.

My problem is if this proposed bill passes parents like myself who have had children who have suffered (albeit not anywhere near as much as some other mothers I know who's children have been left brain damaged or dead) from vaccines, and have made an educated decision that there is a higher risk of their child suffering a reaction than getting the disease, we are forced into a decision whether to potentially harm our child for the sake of them receiving an education. There is next to no chance of getting a medical exemption for most people. This is a blatant violation of human rights.

It concerns me that there have been no long-term, double-blind, placebo controlled studies of the effects of these vaccines on any humans, let alone tiny babies.

It concerns me that the makers of MMR are in court as we speak accused of falsifying data on the effectiveness of mumps component of the MMR and the CDC for covering up that African American boys are 340% more likely to suffer autism like symptoms after the MMR. This is REALLY happening.

It concerns me there is no compensation system in place for vaccine injured children. Can the vaccine manufacturers or governments, or doctors be held responsible? No? So it's left to the parents to sort out?

It concerns me that despite what the whooping cough vaccine insert states "Safety and effectiveness of BOOSTRIX have not been established in pregnant women." it is being advised to be given to pregnant women by our government and doctors and we people who question these "policies" are being labelled "anti-science" (More like anti dodgy-science.)

<http://www.fda.gov/downloads/BiologicsBloodVaccines/UCM152842.pdf>

And on top of this it has been found that the pertussis vaccine does not stop the spread of whooping cough, it merely lessens the symptoms so we have people without the classic "whoop" that would alert them to the fact they are contagious and to stay at home, out and about spreading it, the recently vaccinated visiting newborns thinking they're all safe as they've had the vaccine and shedding it and then happily blaming the disease-free unvaccinated person...why? <http://www.fda.gov/NewsEvents/Newsroom/PressAnnouncements/ucm376937.htm>

Please don't think that because of potential lack of fuss regarding this bill passing that parents are not worried about these issues. They simply have not been presented with sufficient information thanks to the one-sided propaganda displayed in the media and lack of information from the doctors.

My friend took her 1 year old to get the MMR vaccine last week. She asked the doctor straight up how much training he had on vaccines and his answer? "To be honest, not a lot. We know the schedule and what they are to prevent and that's enough." After the doctor left the nurse informed her of how she is uneasy of the vaccine schedule herself.

I don't know ONE person who has been shown the vaccine insert when given a vaccine. By LAW the doctors are required to show the insert. How can anyone give their informed consent when they have not been truthfully informed of the risks or heard of the other side of the story, the thousands of children who DO suffer? Why is the media only showing stories of the rare babies that contract a disease and not the babies who die from a vaccine or are vaccine injured? Do these babies not matter?

I hope you take these points into account, this is not a decision to be taken lightly and it should remain up to the individual whether to vaccinate or no, without being coerced.

Regards
