Subject: vaccine choices

To Committee members --- SARC -- Parliament, vic.

Dear Members,

Re your consideration about blocking the admission of children to childcare and pre-school. This contravenes the medical code of conduct that requires " informed consent without coercion" for all members of the Australian public.

I have a [REDACTED] who was vaccine injured (pertussis -- the whooping cough vaccine) -- - we took a healthy little baby for her recommended vaccination and she finished up with vaccine induced encephalitis -- leaving her with ongoing problems! So sad to see a little life ruined by one jab!

With much assistance and many therapists she has been able to go through the normal school system, and with lots of love and help she is coping reasonably well. BUT how different her life could have been without that reaction to vaccination.

And now the government wants to include the policy to include employees and health students in many work places. This will restrict work for many people who may not be able to be vaccinated.

Please consider carefully and well before you pass this policy -- it will effect so many Australians in this great country of ours.

thank you,
Joan Hall,
