Subject: The proposed changes to Laws regarding vaccination status of a child and childcare accessibility, then schools and universities and heaven only knows what else.

Dear Sirs/Madams,

This type of legislation is a complete infringement of human rights and is completely immoral. To blindly accept a medical/pharma mantra and myth as regards to the safety and efficacy of their hotly disputed vaccination program is showing that those proposing this legislation are devoid of any manner of critical thinking for themselves. Whether they have been bought and payed for by the pharmaceutical industry or just are willing to show a complete lack personal thinking, the result is the same.

There is a lot of science in main stream medical journals that seriously questions the popular blindly held belief that vaccines are good for our health. In fact there are many in our community who are unvaccinated that display a far greater degree of health than many of those who have been subjected to the recommended schedule of vaccines. Hundreds more are in the pipeline awaiting the time that they can convince the 'sheep' to allow themselves and their children to be 'shot up with'.

Just how much untested toxin and other additives are you willing to pump into the human body in the mistaken belief that it will be good for your health or our already over committed health budget.

To my way of thinking, it is you the blind being led buy the nose by those that stand to make an almighty profit from their lies and fraudulent behaviour.

Surely we have the right to decide what medical procedures we wish to partake in. The use of financial coercion, false claims and vigilante groups to obtain a government control over public health is abhorrent

Please for the sake of the health of humanity do not go down this regressive path.

Yours Sincerely,

Bruce Thompson.
