

To The Scrutiny of Acts and Regulations Committee (SARC)  
Victorian parliament  
Australia

26 September 2015

To whom it may concern.

We are very concerned for our rights and the rights of our family. I have always thought that Australia was a free country and one where we are allowed to be free to make decisions that can and will affect our families. I feel the new "No Jab No Play" policy is a complete violation of our rights to decide what medical procedures will and won't be given to our children. It's a violation of freedom of choice.

It's our will not too vaccinate our children. I understand that some vaccines might have a merit in our society. However vaccines are not as safe as the pharmaceutical companies want us to believe and there is a lot of respected research supporting this. My wife and I had childhood diseases as a child. We have had no problems from these diseases as we were nursed back to health by our parents. Our immune system was built up as children and those childhood diseases are part of that process. We want our children to build up the same natural immunity as we have. Natural immunity will always be stronger and better than the manufactured one as supported by history and research.

We have had vaccine injury in our family in the past, which is still affecting and impacting on our family everyday. We are afraid that our children are susceptible to vaccine damage. Pharmaceutical companies worldwide have paid over 20 billion in vaccine damage lawsuits. This is evidence that vaccine damage is real and causes harm. As far as we know there is no avenue for vaccine injured people to be compensated in Australia. Pharmaceutical companies admit that some safety studies have not been conducted. Pharmaceutical companies however do not have any risk associated with vaccines as they are not liable for any damages caused. We are afraid that our beautiful children will suffer an adverse reaction that will affect their lives for the rest of their lives. Adding to this fear is the fact that we as a family are unable to then pay for the best care as there is no compensation scheme in Australia. On top of that, vaccine damage is not acknowledged by medical professionals. Where are we as parents supposed to go when vaccines are forced upon us. We have nowhere to go with our concerns and these concerns are not even to be discussed without fear of being bullied and forced to vaccinate.

When there is a study done that looks at a large proportion of the society and looks at the vaccinated, partly vaccinated and non-vaccinated the outcomes are always that the partly and non-vaccinated are more healthy than the vaccinated. For some reason these studies are not widely accepted. The only reason I can find is that these studies are not supported and funded by the pharmaceutical industry.

We ask you. If we had climate change studies done and the only studies that we take seriously would be the ones that are endorsed and funded by Shell, BP and the likes. Would you take it seriously? If we had studies on the impact of sugar conducted and the only ones that we would see fit to tell us what is the truth are the ones endorsed and funded by Coca Cola, Pepsi, Cadbury and McDonalds. Would you take them seriously? We can't trust a system that is rigged by the pharmaceutical companies. The past has shown that pharmaceutical companies have taken their interests of making money over the wellbeing of their patients over and over again. Wealth over health. I ask you as a parent would you subject your children to something that so easily could cause a threat to them. We will not be bullied into vaccinating our children. We want to be free to make this decision without having our government take our freedoms and rights away. Vaccinations are a \$48 billion a year industry. Something that the pharmaceutical companies will defend to their graves.

We live in a world where health care is profitable business. Where profit is taken as more important than the wellbeing of the society over and over again. We cannot just sit back and let these major corporations take over our wellbeing. If you as a politician, have the best for your constituents at hand, you have to take this in to account. You cannot just trust these companies to tell the truth and do the right thing. They are driven by profit and as we all know, money does make people do evil sometimes. You have to consider the numerous studies that have been done into natural immunity, the ineffectiveness of herd immunity and the fast tracking and unsavoury testing of some of these vaccines. There has been numerous vaccines withdrawn from use after being in circulation and proven to have dangerous side effects. In the 1950's doctors, specialists and politicians all were sure that smoking did not cause cancer. We know better now. Let us not forget about asbestos, DDT, BPA, leaded gasoline, mercury fillings, thalidomine and diethylstilbestrol DES. All once declared safe by almost everyone in the medical and scientific world. New and independent research has made us aware of these dangerous substances that used to be all around us. This is a reason not disregard new and independent research on vaccines, vaccine injury, herd immunity and the way that vaccines are tested. Australia should take note of these new studies being conducted around the world. Numerous countries have changed their vaccine schedules due to this new research with great success in infant mortality rates and disease control.

It's our will to live in a free Australia and not vaccinate. The risk associated with it are to great to take. Our children are receiving immunisation for some of the more serious diseases in the program anyway. That we choose to do this through a homeopathic and natural solution should be our right. We should not be made to be subjected to something that might cause harm. We choose to feed our children organic food and my wife breastfed them. They have not been sick, except for a snotty nose or small cough. This is what the immune system should be confronted with at their age.

We ask you to take these studies and facts below into consideration before going ahead and depleting the human rights of all Australians.

Kind regards.

Olivier Vles and Giselle Vles
